SKU: 9251

CONDITION: Used

WEIGHT: 32.00 LBS

SHIPPING: Calculated at Checkout

\$900.00

Out of stock

DESCRIPTION

- The Lablyte system 830 electrolyte analyzer is an automated microanalyzer intended for the use in the vitro quantitative measurement of sodium, potassium, and lithium in whole blood, and plasma.
- The system determines the sodium, potassium, and lithium concentration by measuring the electrolyte ions in solutions using direct ion-selective electrodes.
- The Lablyte system 830 microprocessor controls and coordinates all functions initiated by the operator or by the analyzer.
- It continuously checks for proper operation of all systems and if irregularities are detected it notifies the operator by displaying a system status message.
